Frontend Engineer – Internal Tools

Location	Reading
Salary	Up to £103k
Contract Type	Permanent

This is a unique opportunity join an incredibly exciting and innovative FinTech company which has taken the US by storm. You will be part of the driving force behind our UK brand launch. We have immediate opportunities for great people to join us. You'll help to drive our vision to pioneer the future of personal finance and share our passion for creating social value.

Stash is a digital-first financial services company committed to making saving and investing accessible to everyone. By breaking down barriers and building transparent, technology-driven products, we help the 99% build smarter financial habits so they can confidently save more, grow wealth, and enjoy life. We're are an established brand in the US. And now we are expanding to the UK.

THE ROLE:

Our Internal Tools team is looking for a Frontend Engineer with a passion for building reliable, scalable, and performant software to support the Stash mission. We've had tremendous growth in the past four years and are building an amazing team that creates the software that makes all aspects of our business faster and more efficient. As an engineer on this team, you'll get to work with every department and to have the flexibility to use your creative problem solving skills to improve the Stash process in near real-time.

WHAT YOU'LL DO:

- Design and implement intuitive web applications for our internal tools team

- Build and maintain scalable and well tested web applications using ReactJS and NodeJS
- Work on new, greenfield projects that will have an immediate impact on our company
- Collaborate with an agile, cross-functional team while communicating project guidelines, reinforcing best practices, and utilizing modern tooling
- Instrument, test, profile, and code review software
- Continuously deploy to our cloud-based infrastructure

YOUR BACKGROUND:

- 3+ years of professional experience building full-stack web applications
- Bachelors or Masters in Computer Science, or relevant industry experience
- Experience using a modern JavaScript framework such as ReactJS, Ember, Angular, Vue, etc
- A keen interest in testing best practices and high code quality
- Experience with development tools such as webpack, babel, and git
- Understanding of common web application design patterns and browser compatibility concerns

If you have experience of the following, even better …

- Experience working on a popular consumer facing application
- Experience with ReactJS, Redux, JavaScript ES6/7, HTML5, CSS3, NodeJS, Express, and Jest
- Test Driven Development (TDD)

DID WE MENTION THE BENEFITS?

- Competitive salaries
- Equity in Stash,
- Healthcare
- Pension scheme
- Learning and development opportunities
- Substantial employee referral bonuses
- Flexible holidays
- Flexible working
- A great office environment!

WE'D LOVE TO HEAR FROM YOU:
