

QA Engineer – Internal Tools

Location	Reading
Salary	Up to £60k
Contract Type	Permanent

This is a unique opportunity join an incredibly exciting and innovative FinTech company which has taken the US by storm. You will be part of the driving force behind our UK brand launch. We have immediate opportunities for great people to join us. You'll help to drive our vision to pioneer the future of personal finance and share our passion for creating social value.

Stash is a digital-first financial services company committed to making saving and investing accessible to everyone. By breaking down barriers and building transparent, technology-driven products, we help the 99% build smarter financial habits so they can confidently save more, grow wealth, and enjoy life. We're are an established brand in the US. And now we are expanding to the UK.

THE ROLE:

Stash is seeking a dedicated, motivated, and reliable QA Engineer to work with the latest cutting-edge technologies and become a subject matter expert in our fast innovative culture. This individual will be responsible for the design, verification, deployment, and ownership of our release management cycle for our Internal Tools team. The QA Engineer will identify defects and resolve issues through a series of tests while optimizing productivity and understanding technical concepts. If you are an open communicator with a passion for shipping bug-free software, love to think outside the box *and* you are excited about changing the world of investing, Stash is looking for you!

WHAT YOU'LL DO:

- Collaborate with Product Managers and Developers in understanding both functional and non-functional requirements

- Manage the release cycles of our apps: iOS, Android, and Web
- Develop QA processes to ensure we catch as many bugs as possible before release
- Develop QA processes to ensure we catch as many bugs as possible before release
- Develop tools and processes to improve delivery efficiency
- Manage communication of progress/status to stakeholders
- Log defects, testing/retesting defects, and track progress and results
- Ensure direct communication over email/ticketing chain to ensure timely resolution of identified issues
- Stay focused on chasing down and removing impediments on behalf of the team
- Triage bugs and other improvements to alleviate issues swiftly

YOUR BACKGROUND:

- 3+ years working in QA at a software company (startup environment preferred)
- Degree in computer science or relevant software development experience
- Knowledge of manual and automation testing
- Experience working with Postman
- Strong understanding of RESTful API
- Experience in troubleshooting issues and root cause analysis
- Excitement and passion to innovate in finance
- A proven track record of delivering high quality and tested software on-time and often
- An open mind, flexibility around testing new approaches and the ability to harness failures and turn them into wins.

If you have experience of the following, even better ...

- Experience with test automation against web applications and APIs

DID WE MENTION THE BENEFITS?

- Competitive salaries
- Equity in Stash,
- Healthcare
- Pension scheme
- Learning and development opportunities
- Substantial employee referral bonuses
- Flexible holidays
- Flexible working
- A great office environment!

WE'D LOVE TO HEAR FROM YOU:
