

Senior Backend Engineer

Location	Reading
Salary	Up to £90k
Contract Type	Permanent

This is a unique opportunity join an incredibly exciting and innovative FinTech company which has taken the US by storm. You will be part of the driving force behind our UK brand launch.

We have immediate opportunities for great people to join us. You'll help to drive our vision to pioneer the future of personal finance and share our passion for creating social value.

Stash is a digital-first financial services company committed to making saving and investing accessible to everyone. By breaking down barriers and building transparent, technology-driven products, we help the 99% build smarter financial habits so they can confidently save more, grow wealth, and enjoy life. We're are an established brand in the US. And now we are expanding to the UK.

THE ROLE:

Our Internal Tools team is looking for a Senior Backend Engineer with a passion for building reliable, scalable, and performant software to support the Stash mission. We've had tremendous growth in the past four years and are building an amazing team that creates the software that makes all aspects of our business faster and more efficient. As an engineer on this team, you'll get to work with every department and to have the flexibility to use your creative problem-solving skills to improve the Stash process in near real-time.

WHAT YOU'LL DO:

- Architect, design, and implement internal applications that support the Stash experience, including robust backend services and amazing CLI tools

- Partner with every department to come up with new features and applications
- Own the end to end delivery of software components from inception to production
- Talk directly to the end-users on a daily basis
- Work in a cross-functional agile team to deliver working software incrementally
- Instrument, test, profile, and code review software
- Continuously deploy to our cloud-based infrastructure
- Scale software infrastructure for a quickly-growing user base

YOUR BACKGROUND:

- 5+ years of professional experience building consumer-facing software
- BS/MS in Computer Science or relevant industry experience
- An experienced engineer who can turn ideas into reliable code that others find easy to understand and modify
- Experience building backend RESTful APIs
- Creative problem solver with a passion for testing, debugging, and overall code quality
- Data-driven decision maker, willing to take risks, fail fast, and iterate quickly
- A keen understanding of testing best practices (TDD is a plus!)

If you have experience of the following, even better ...

- Experience building an application at scale
- Familiarity with or interest in our stack JavaScript, React.js, Node.js, Ruby, Rails, Scala, Kotlin, Sidekiq, Heroku, Postgres, Redis, AWS, Terraform

DID WE MENTION THE BENEFITS?

- Competitive salaries
- Equity in Stash,
- Healthcare
- Pension scheme
- Learning and development opportunities
- Substantial employee referral bonuses
- Flexible holidays
- Flexible working
- A great office environment!

WE'D LOVE TO HEAR FROM YOU:
