STASH

Senior Dev Ops Engineer

Location	Reading
Salary	Up to £95k
Contract Type	Permanent

This is a unique opportunity join an incredibly exciting and innovative FinTech company which has taken the US by storm. You will be part of the driving force behind our UK brand launch.

We have immediate opportunities for great people to join us. You'll help to drive our vision to pioneer the future of personal finance and share our passion for creating social value.

Stash is a digital-first financial services company committed to making saving and investing accessible to everyone. By breaking down barriers and building transparent, technology-driven products, we help the 99% build smarter financial habits so they can confidently save more, grow wealth, and enjoy life. We're are an established brand in the US. And now we are expanding to the UK.

THE ROLE:

As a Senior DevOps Engineer, you're someone who is comfortable both working independently and alongside other developers. You will build out and shape our operations platform and processes so we can build, test, and release software faster and more reliably.

WHAT YOU'LL DO:

- Build and maintain a development pipeline and automating code to production (including both application code and infrastructure code)
- Develop and maintain infrastructure modules for use by engineering staff
- Ensure infrastructure has high availability and alerting for any anomalous system behaviour
- Implement PCI-compliant procedures to ensure segregation of duties
- Automate deployment and scaling of containerised applications

intelligent resource
Your people. Your performance. Our priority.

- Build configuration management system for applications and infrastructure
- Partner with engineering and security teams on prioritisation and execution

YOUR BACKGROUND:

- 6+ years of professional experience
- Bachelors or Masters in Computer Science, a related technical field, or relevant industry experience
- Experience working with Terraform (or Terraform Enterprise)
- Experience working with AWS
- Experience with configuration management tools such as Ansible, Salt, Puppet, Chef
- Experience building CI/CD pipelines
- Experience with version control and using Git
- Experience with programming languages

If you have experience of the following, even better …

- You've built a CI/CD Pipeline from the ground level
- You have experience using CircleCI
- You have experience working with Ansible
- Experience coding in Ruby, Python, Java, or Scala

DID WE MENTION THE BENEFITS?

- Competitive salaries
- Equity in Stash,
