

## Technical Product Manager

<b>Location</b>	Reading
<b>Salary</b>	Up to £96k
<b>Contract Type</b>	Permanent

This is a unique opportunity join an incredibly exciting and innovative FinTech company which has taken the US by storm. You will be part of the driving force behind our UK brand launch. We have immediate opportunities for great people to join us. You'll help to drive our vision to pioneer the future of personal finance and share our passion for creating social value.

Stash is a digital-first financial services company committed to making saving and investing accessible to everyone. By breaking down barriers and building transparent, technology-driven products, we help the 99% build smarter financial habits so they can confidently save more, grow wealth, and enjoy life. We're are an established brand in the US. And now we are expanding to the UK.

### THE ROLE:

We're looking for a Technical Product Manager who has proven experience delivering software and is a master at optimising productivity and understanding technical concepts. If you are an open communicator with a passion for shipping bug-free software *and* you are excited about changing the world of investing, Stash is looking for you!

### WHAT YOU'LL DO:

- Prioritise a feature backlog for a backend engineering team juggling multiple work streams
- Answer day-to-day product questions from engineers to guide implementation
- Manage communication of progress/status to internal and external stakeholders
- Triage bugs and other improvements to alleviate issues swiftly

- Develop tools and processes to improve team efficiency, delivering more value to the customer, and the company, faster
- Support operations, compliance, and customer experience teams in their technical questions and needs
- Identify and implement ways to improve the systems backing our trades, transactions, and money-movements
- Work with other product managers to understand how the system works and support necessary backend changes for feature development
- Guide the next phase of development as the application scales to multiple services and teams

### **YOUR BACKGROUND:**

- 3+ years working in software engineering or technical product management at a software company
- Knowledge of SQL and/or data modelling and analysis tools
- Knowledge of technical microservices architecture
- Knowledge of REST, JSON or similar
- Experience with order/transaction processing marketplace platforms a strong plus
- Previous experience in a production engineering role
- Excitement and passion to innovate in finance
- A proven track record of delivering high-quality and tested software on-time and often
- An open mind, flexibility around testing new approaches and the ability to harness failures and turn them into wins
- Degree in computer science or relevant software development experience preferred

### **DID WE MENTION THE BENEFITS?**

- Competitive salaries
- Equity in Stash,
- Healthcare
- Pension scheme
- Learning and development opportunities
- Substantial employee referral bonuses
- Flexible holidays
- Flexible working
- A great office environment!

### **WE'D LOVE TO HEAR FROM YOU:**
